The library was constructed according to Munaldo, Lennon and Soares, Genome Research, 6:791-806, 1936, First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I and cloned directionally into pT7T3-Pac vector. The ligoroelectide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located to ween the Not I site and the (dT)18 tail. The sequence that for this library is AACTGTTCGG.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note="Organ: Lung; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; NCI_CGAP_DT1 is a normalized cDNA librar: containing the

                                                                                                                                                                                                                                                                                                                                                                 Ŷ
                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC The present invention relates to an isolated nucleic acid encoding a CC melanoma differentiation associated gene-5 (Mda-5) polypeptide. Mda-5 CC contains a caspase recruitment domain (CARD) and a RNA helicase motif. CC Mda-5 is a novel interferon (IFN) inducible gene with structural CC similarities to RNA helicases and CARD motif containing proteins. Mda-5 is induced during terminal differentiation in human melanoma cells CC is induced during terminal differentiation in human melanoma cells CC treated with the combination of recombinant fibroblast IFN and the CC antileukaemic compound mezerein (MEZ). Mda-5 is useful for treating CC compounds that may induce its expression. Mda-5 is useful for treating CC cancer e.g., melanoma, neuroblastoma, astrocytoma, glichlastoma CC multiforme, cervical cancer, breast cancer, colon cancer, prostate CC cancer, osteosarcoma, chrondosarcoma and especially where the cancer is a cancer of the central nervous system and appotosis. The Mda-5 promoter CC exhibits melanocyte tissue specificity and minimises systemic toxicity. XX

RHl16 is a l16kDa protein and has homology to RNA helicases (DENH 100X). RHl16 and its coding sequence are useful for treating cancer; accuse or chronic infections (especially by HIV or hepatitis H or C); interited genetic diseases; (auto) Lumune diseases (particularly rheumatics, arthritis, arterioscierosis, osteoporosis and diabetes, but many thers listed) and to prevent graft rejection. RHl16 and its coding sequence are also useful for inducing, or increasing, the immune response to a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polypeptide, useful for treating and diagnosing calcor or inflammation, and drug screening, comprises a human polynucleotide homologous to RNA helicase .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 3372 BP; 1157 A; 637 C; 748 G; 830 T; 0 other:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to an isolated nucleic acid encoding a CC melanoma differentiation associated gene-5 (Mda-5) policipated. Mda-5 CC contains a caspase recruitment domain (CARD) and a RNA Helicase motif. CC Mda-5 is a novel interferon (IFN) inducible gene with cructural CC similarities to RNA helicases and CARD motif containing proteins. Mda-5 is induced during terminal differentiation in human melanoma cells CC treated with the combination of recombinant fibroblast FNA and the CC antileukaemic compound mezerein (MEZ). Mda-5 is useful for treating CC compounds that may induce its expression. Mda-5 is useful for treating CC cancer e.g., melanoma, neuroblastoma, astrocytoma, glicilastoma CC multiforme, cervical cancer, breast cancer, color cancer, prostate CC cancer of the central nervous system and apoptosis. The Mda-5 promoter CC acheer of the central nervous system and apoptosis. The Mda-5 promoter CC exhibits melanocyte tissue specificity and minimises systemic toxicity. The present sequence is human Mda-5 protein-related DNA. CC The present sequence is designated SEQ ID NO:2 in the sequence CC listing, but does not correspond to the sequence designated SEQ ID NO:2 in the main body of the specification (AAEIO155). The hissent sequence is not further referred to in the sequence listing, and has been represented CC in the main body of the specification, and has been represented XX

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          17 - NOV - 2000;
            The present invention relates to the isolation of novel human enzyme polypeptides (AAU23915-AAU23814), and the cDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of disorders including hyperproliferative disorders (e.g. cancer), inmunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. Alzheimer's disorders (e.g. arthritis), peurological disorders (e.g. arthritis), peurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  17-NOV-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       blood-related disorders (e.g. haemophilia), reproductive disorders (e.g. infertility) and infectious disorders (e.g. Influenza). The polynucleotides of the invention can also be used in gene therapy. AAS40785-AAS41684 represent cDNA sequences encoding for the novel human enzyme polypeptides of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fifth, wipo.int/pub/published_pct_sequences.

RH116 and its coding sequence are also useful for inducing, or increasing, the immune response to a succine. The present sequence was used in an example from the present invention.
                                                                                                                                                                                                                                                      1107

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to human RH116 (see AAM47798). RH116 is a l16kDa protein and has homology to RNA helicases (DEXH hox). RH116 and its coding sequence are useful for treating cancer; are to end conficulations (especially by HIV or hepatitis B or C); interited genetic diseases; (auto)immune diseases (particularly rheumatism, arthritis, arteriosclerosis, osteoporosis and diabetes, but many others listed) and

                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAI57793-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymic entides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the foripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/Inhibin activity, Chemotactic and therew.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the isolation of novel human onzyme polypeptides (AAU22915-AAU23814), and the cDNA and generals sequences cenceding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, lyases, lyases or ligases. The sequences of the invention are useful in the clasmes or ligases. The sequences of the invention are useful in the clasmests including hyperproliferative disorders (e.g. cancer). The invention are useful in the clasmest including hyperproliferative disorders (e.g. cancer). The invention are useful in the clasmest including hyperproliferative disorders (e.g. cancer). The invention classes of a wide range of clasmest clasme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches 1023;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 in gene therapy. A composition containing a polypeptide or polyrucleotide of the invention may be used to treat diseases of the cripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, chemotactic/Chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammatic., leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                pathology associated with IFN polypeptide in a human. They are useful for Cd determining the presence of or predisposition to a disease associated with altered levels of IFN polypeptide or polypuncleotize. IFN nucleic Cd acids, polypeptides and antibodies are useful for diagnosis, prevention CG or treatment of variety of immunological and cell proliferative CC disorders, such as autoimmune diseases e.g. lupus erythematosus, cC immunodeficiency diseases such as acquired immunodeficiency syndrome (AIDS), graft rejection, viral infections including heratitis and human Climunodeficiency virus (HIV), immune-mediated glomerulchephritis, cC haematologic diseases such as aplastic anaenia and chronic neutropenia conditions diseases such as aplastic anaenia and chronic neutropenia conditions diseases such as aplastic anaenia and chronic neutropenia conditions diseases, amyotrophic lateral sclerosis and spinal muscular carlous disorders associated with cell death, including myocardial controphy. IFN nucleic acids and polypeptides are also useful for cidentifying interferon-like porteins and interferon agenists, for concentration and as targets for the identification of small molecules that carlous drugs and compounds which inhibit or enhance IFN activity or function and as targets for the identification of small molecules that carlous than a crowth in mammals, including humans.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Interferon induced nucleic actu, accommunication provided immunodeficiency; stroke; acquired immunodeficiency syndrome; AIDS; graft rejection; viral infection; hepatitis; aplastic anaemia; cancer; human immunodeficiency virus; HIV; immune-mediated glomerulonephritis; haematologic disease; chronic neutropeenia; myocardial infarction; neurological disease; thronic neutropeenia; myocardial infarction; neurological disease; hardimers disease; Parkinson's disease; thronic neurological disease; anaemal muscular atrophy; human; IFN6; ds
                                          The sequence represents interferon induced nucleic acid, IFN6. IFN nucleic acids and polypeptides are useful for treating or preventing a pathology associated with IFN polypeptide in a human. They are useful for determining the presence of or predisposition to a disease associated with altered levels of IFN polypeptide or polynucleotide. IFN nucleic acids, polypeptides and antibodies are useful for diagnosis, prevention or treatment of variety of immunological and cell proliferative disorders, such as autoimmune diseases e.g. lupus erythematosus, immunodeficiency diseases such as acquired immunodeficiency syndrome immunodeficiency diseases such as acquired immunodeficiency syndrome actions and the second between the control of the 
                                                                                                                                                                                                                                                                                                                                                                            New interferon induced polypeptides and polynucleotides, useful for the diagnosis, prevention and treatment of immunological, cell proliferative disorders, such as lupus erythematosus, cancer, stroke and Alzheimer's disease
                                                                                                                                                                                                                                                                                                                             Claim

In addition they are also useful for treating or diagnosing various disorders associated with cell death, including myocardial infarction, stroke, neurological diseases including Altheimer's and Parkinson's diseases, amyotrophic lateral sclerosis and spinal muscular atrophy. IFN nucleic acids and polypeptides are also useful for identifying interferon-like proteins and interferon againsts, for screening drugs and compounds which inhibit or enhance IFN activity or function and as targets for the identification of small molecules that are immunostimulatory, immunosuppressive, or stimulate or suppress normal cell or tumour cell growth in mammals, including humans.

                                                                                                                                           The present invention relates to an isolated nucleic acid encoding a melanoma differentiation associated gene-5 (Mda-5) polypeptide. Mda-5 contains a caspase recruitment domain (CARD) and a RNA helicase motif. Mda-5 is a novel interferon (IFN) inducible gene with structural similarities to RNA helicases and CARD motif containing proteins. Mda-5 is induced during terminal differentiation in human melanoma cells treated with the combination of recombinant fibroblast IFN and the antileukaemic compound mezerein (MEZ). Mda-5 is useful for identifying compounds that may induce its expression. Mda-5 is useful for treating cancer e.g., melanoma, neuroblastoma, astrocytoma, glioblastoma multiforme, cervical cancer, breast cancer, colon cancer, prostate cancer, osteosarcoma, chrondosarcoma and especially where the cancer is a cancer of the central nervous system and apoptosis. The Mda-5 promoter exhibits melanocyte tissue specificity and minimises systemic toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RNA helicase motif; caspase recruitment domain; CARD; therapy; melanoma; neuroblastoma; astrocytoma; glioblastoma; multiforme; cancer; cervical; breast; colon; prostate; osteosarcoma; chrondosarcoma; systemic toxicity; central nervous system; cytostatic; apoptosis; ds.

                                                                                                                                                            The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human toetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form paid of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 6391 CTGGTGGACAAGCTTC 6406
